

# DOGGETT CONNECT

MACHINE UPTIME ASSURANCE,  
FOR YOUR PEACE OF MIND

Doggett has experienced equipment professionals who can provide valuable insight into the operation of your equipment. Through the power of technology, telematics has given our personnel the capability of remotely monitoring your equipment to maximize your uptime.

Doggett has many levels of machine monitoring packages to meet your equipment management needs and your budget. Check out the many options and features available, and consult with your Doggett Sales Professional or Customer Service Advisor.

## BRONZE

Bronze is our entry level Telematics monitoring package. Non-Deere equipment must be outfitted with a universal telematics system for tracking basic information. John Deere equipment will either come from the factory equipped with JDLink Ultimate, or must have it installed.

JDLink Ultimate  
1 Year Subscription  
+ Bronze

**\$200.00/yr<sup>1</sup>**

## SILVER

Silver includes the features of our Bronze package, but also provides the added benefit of Red Alert notifications for critical alerts on John Deere equipment as well as notifications of critical fluid sample results for both John Deere equipment and non-Deere equipment.

JDLink Ultimate  
1 Year Subscription  
+ Silver

**\$250.00/yr<sup>1</sup>**

## GOLD

Gold includes the features of our Silver package, but also entitle you to yearly JDLink trainings, every type of machine alert that is available, and notifications of abnormal fluid sample results.

JDLink Ultimate  
1 Year Subscription  
+ Gold

**\$300.00/yr<sup>1</sup>**

## PLATINUM

THE **PREMIER**  
DOGGETT CONNECT MACHINE  
MONITORING PACKAGE.

With this level of service you'll receive unlimited JDLink training for your personnel. Preventive maintenance management is included. Doggett will provide you with monthly reports showing your preventive maintenance history. We'll also take the hassle out of preventive maintenance by coordinating and scheduling these services within 50 hours of them coming due.

The Platinum package includes John Deere's industry leading Service Advisor Remote (SAR) service. With SAR, Doggett can remotely connect to your machine while it's operating in cellular coverage to retrieve up to date codes, clear codes, perform software updates to electronic controllers, record valuable machine operational data, and analyze that data to identify many issues from miles away. SAR diagnosis can often help you resolve issues without the need for a tech onsite. In the event that a Doggett field technician is needed to correct the issue they can often gather necessary parts and tools prior to their visit. Preparing our technicians before sending them to your jobsite results in fewer trips out to a machine, which helps us deliver on our promise to limit your downtime and reduce your service expense.

The Platinum package also entitles you to Priority Dispatch when you have equipment downtime.
